SUMMARY

Results-driven Computer Engineering student with hands-on experience in Full Stack Development, AI/ML, and Computer Vision, backed by 3 internships across Python automation, Java enterprise applications, and React-based web development. Proficient in building end-to-end solutions from training YOLOv8 deep learning models to architecting scalable MERN stack SaaS platforms with real-time messaging and REST API integration. Experienced in Agile environments with strong command of Git, CI/CD practices, and cross-functional collaboration. Seeking a software engineering or AI/ML role to deliver impactful, production-ready solutions at scale.

EDUCATION

Savitribai Phule Pune University (SPPU)

Bachelor of Engineering in Computer Engineering | SGPA: 8.40 / 10.00

July 2023 – June 2026

Nashik, Maharashtra

- Institution: Sir Visvesvaraya Institute of Technology (SVIT), Nashik
- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Artificial Intelligence, Machine Learning

EXPERIENCE

Arobix AI Pvt. Ltd.

Software Engineer Intern

Present

Nashik, India

- Developed and optimized Python-based AI and automation pipelines for business and research applications, improving processing efficiency by streamlining data ingestion and inference workflows
- Built, trained, and fine-tuned Computer Vision models using YOLOv8 for real-time object detection, image classification, and instance segmentation on custom datasets
- Implemented end-to-end Machine Learning (ML) workflows including data preprocessing, feature engineering, model evaluation, hyperparameter tuning, and production deployment using REST APIs
- Contributed to CI/CD pipelines, version control workflows using Git and GitHub, code reviews, and software quality assurance within Agile (Scrum) SDLC environments
- Collaborated cross-functionally with team members to deliver scalable, maintainable software solutions aligned with business requirements and project timelines

The Innovative Solutions

Full Stack Frontend Developer Intern

June 2025 – September 2025

Nashik, India

- Developed responsive, cross-browser-compatible web applications using React.js, JavaScript (ES6+), HTML5, and CSS3 following modern frontend best practices and component-based architecture
- Designed and iterated on UI/UX prototypes using Figma; collaborated in Agile sprints using Git, Node.js, and Express.js for seamless frontend-backend integration
- Optimized web performance through lazy loading, code splitting, and RESTful API integration, improving page load times and user experience

Technorbit Infosystems

Full Stack Java Developer Intern

January 2025 – February 2025

Nashik, India

- Built and deployed enterprise web applications using Core Java, Servlets, JSP, JDBC, SQL, and Apache Tomcat server following MVC (Model-View-Controller) design pattern
- Implemented full CRUD operations, relational database design, and RESTful service integration to develop scalable, maintainable enterprise-grade applications
- Participated in software development life cycle (SDLC) phases including requirements gathering, design, coding, testing, and deployment

PROJECTS

Aroskope – WhatsApp Automation CRM (SaaS)

Present

- Architecting and developing a SaaS-based WhatsApp Business CRM platform using the MERN stack (MongoDB, Express.js, React.js, Node.js) with multi-tenant, multi-user workspace support and end-to-end communication automation
- Built feature modules for bulk messaging, contact management, label tagging, ticketing system, to-dos, and real-time chat management with webhook integration for WhatsApp Business API
- Designed and implemented scalable RESTful APIs, JWT-based authentication and authorization, role-based access control (RBAC), and WebSocket-based real-time messaging infrastructure
- Applied microservices principles, NoSQL database schema design, and cloud-ready architecture for high-volume, concurrent WhatsApp interactions

Bottle Cap Defect Classification System – Computer Vision

April 2026

- Designed and deployed an end-to-end Computer Vision quality inspection system using Python, YOLOv8, and OpenCV for automated bottle cap defect detection and multi-class classification
- Collected, annotated, and augmented custom image datasets; trained deep learning models with transfer learning achieving high classification accuracy and low false-positive rates in production
- Built a real-time desktop monitoring dashboard using PyQt5 featuring live image analysis, bounding box visualization, prediction confidence scores, and model performance metrics tracking
- Optimized inference pipeline for low-latency, real-time edge deployment suitable for industrial manufacturing environments

SKILLS

Programming Languages: C, C++, Core Java, Python, JavaScript (ES6+), SQL, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Spring Boot, PyQt5, JDBC, Servlets, JSP, REST API, WebSocket

Databases: MongoDB, MySQL, NoSQL, JDBC, SQL Query Optimization

AI / ML & Computer Vision: Machine Learning, Computer Vision, YOLOv8, PyTorch, Model Fine-Tuning, Object Detection, Image Classification

Web & Architecture: MERN Stack, MVC Architecture, RESTful API Design, JWT Authentication, Role-Based Access Control (RBAC), Agile (Scrum)

Tools & Platforms: Git, GitHub, VS Code, Eclipse, Postman, Figma, Apache Tomcat, CI/CD, Docker (familiar)
